Subject: [Skylark][witz] How would you do this

Suppose in a witz

$Title

Will produce in the resulting html document something like this

Some Report

My intended result is something like

Some Title

Basically, I need to put some text in the quoted text created by $Handler(v).

In my case $v and $Title are actually key and value of an entry in a ValueMap. I have attempted to make $v = "1.pdf#page=3", but don't know how to prevent it from being HTML escaped.

What's the suggested way of achieving the intended result?
