peterh wrote on Sun, 09 June 2019 06:37Unfortunately C++ has no Property members. :twisted:

This statement is not entirely correct :roll:
C++ doen't have properties built into the language itself, but properties can be implemented in just a few lines of code. I did that by accident when working on a "restricted value" framework last weekend.
Property is a value wrapper, which doesn't store an actual value ... :roll:
C++ has ZERO builtin functionality. Even STL is a replaceable library ...
