Hello comunity,

I have added LibCurl to my project (https://curl.haxx.se/download.html I have downloaded Win32 and Win64 version).

And I still got linking error

According to   https://stackoverflow.com/questions/5485081/how-do-i-solve-t hese-libcurl-linking-errors

I should try to compile with "-DCURL_STATICLIB".
But I have tried to set the compile option here :

Build methods windows -> common link options
Output mode -> Command line options
Package organizer -> new compiler options

and still get this linking error.

Can someone help me ?

Thanks in advance

best regard.

[SOLVED] Used the wrong 32/64 bits file :(:(
