
Subject: TheIDE for Windows doesn't run

Hi,

The latest builds of TheIDE (13393, 13402, 13419) don't start on my Windows 10. After choosing the main package, they close the window without any message. Since no one complains, I think that it's my problem, however, build 13389 and all previous work OK.

An application error appears with no useful information. Maybe, the line:

will help.

Any suggestions?

Thanks,
Victor
