Subject: Re: How to inspect memory at pointer-address while debugging
Posted by slashupp on Sun, 30 Jun 2019 08:12:16 GMT

hi mirek

I use Linux (Devuan/Debian)

Quote:Right-click the watch/auto line with ptr value, "Memory at...":

R-click shows only "Insert / Edit / Delete"-options in Watches-tab,
no effect when I R-click in Auto/Locals-tabs

Is there some setting I need to change, add something somewhere, an option I need to tick?

PS: I see this "Memory at" is in Pdb.h which depends on PLATFORM_WIN32 (in Debuggers.h line 115)
Is it not available for Linux?
