```
void Font::InitStdFont()
{
    ONCELOCK { // TODO: This is now sort of obsolete function....
        // Mutex::Lock ____(sFontLock);
        // FaceList();
        AStdFont = Arial(12);
        // SyncStdFont();
    }
}
```

Maybe Arial does not exist on raspbian and it occurs a Crash?
