upp svn 13011

what do I need to do to get a properly populated log-file?

when I press Alt+L all it contains is my project output location (upp.out/...) and the line

***** PANIC: Invalid memory access!

Well, did you add any LOGs to populate it?

Normally, logfile is empty, unless you put something there.

Also, LOG only works in debug mode, in release it is excluded from the final code.
