slashupp wrote on Wed, 17 July 2019 10:35mirek :) seems we were trying to do the same question at the exact same moment & the forum-tool couldn't handle it :)
I started a second question, maybe you should delete that one

Quote:Normally, logfile is empty, unless you put something there.

Also, LOG only works in debug mode, in release it is excluded from the final code.

(my app does keep it's own logging and there is no problem with that)

I want the log-output from theide/upp specifically this:
https://www.ultimatepp.org/srcdoc$Core$Leaks_en-us.html

Are you trying to catch leaks?

    StdLogSetup(LOG_COUT|LOG_FILE);

Just to provide correct explanation of above code: It sets log to output both to console AND log-file. However, the default is to output to log (so above just adds output to the console).
