Subject: Menus become inaccessible

Hi,

It seems that pull down menus opened from the main menu can become inaccessible. To reproduce (using e.g. TheIDE on Windows):

1. Click on a main menu item to open its pull down menu.
2. While the pull down menu remains open, minimize the window using the minimize button on the title bar.
3. Then restore the window again from the task bar.
4. When attempting to access the same pull down menu from the main menu, it will not show up anymore.

(There is a workaround to get away with this, though: When the pull down menu is selected from the main menu, but does not open, tap on Esc key a few times. Then the pull down menu will close logically and become accessible again.)

This is a long standing bug I have been seeing occasionally for years, but never was able reproduce.

Best regards,

Tom
