Hi,

I have a problem with LanguageInfo. I would like to use separators based on selected language. But when I execute `GetLanguageInfo().ToString()` I got

```
LANGUAGE={EN-US}ENGLISH NAME={English}NATIVE NAME={English }THOUSAND  
SEPARATOR={}DECIMAL POINT={}MONTH NAMES={ } / { } / { } / { } / { } / { } / { } / { }  
/ { } / { } / { } / { } / { } / { } / { } / { }DAY NAMES={ } / { } / { } / { } / { } / { } / { } / { }
```

There is also problem with Format function. When the language is set to `SetLanguage(LNGC_('C',`
returns "12345670".

OS: Linux ul001602 4.18.0-25-generic #26~18.04.1-Ubuntu SMP Thu Jun 27 07:28:31 UTC 2019
x86_64 x86_64 x86_64 GNU/Linux
Compiler: clang version 6.0.0-1ubuntu2 (tags/RELEASE_600/final)

Test is attached (Message edited - test replaced).

Thanks for help, Radek
