Macros are really "methods of editor", and SetCursor etc.. are methods too, that is why you cannot invoke them in global functions. You need to define a method...

```
.test = @(a, b)
{
  SetCursor(0);
  if (Find("STD::COUT", 1, 1))
  {
    f = GetSelBegin();
    l = GetSelCount();
    SetCursor(f);
    Remove(l);
    s = a + "::" + b;
    Insert(s);
  }
};

test(A, B);
```
