This won't compile:

```
const VectorMap<Vector<String>, String> MY_MAP = {
    {Vector<String>{"s11", "s12", "s13", "s14"}, "s1"},
};
```

pick wasn't needed because Vector<String>{...} is an rvalue by itself.

Works now. Thanks.

Quote:
It would be great to have all overloads of
 VectorMap& VectorMap&::operator()(const K& k, const T& v)

similar to AMap::Add(k, v).

Done. Long live std::forward...
