Hello guys,

first of all CONGRATULATIONS FOR UPP!

I am looking over the UPP project since a while and finally this week I have decided to give it some time and efforts, but I am facing problems to let it works!
I tried to install and work UPP in Linux (my usual working environment) with no success and at last I decided to give a try in Windows, that works neither.
After some time spent (in Windows) trying to solve the error "collect2.exe: No such file or directory" - that I did not understand how I solved changing paths several times and so on - now, while trying to compile any of the given example programs, I have this error:

```
Message (1 error)
Linking has failed
c++.exe: error: CreateProcess: No such file or directory
```

Stucked here!

Please help me or I will have to look for another framework for my future projects.
