Hi all-

I am practicing U++. I am having trouble with dates in sqlbool with sqlset situations and also just plain sqlarray.query() commands.. It returned the ID and location just fine.

If anyone has a quick moment can you please take a gander at this small snippet of code and tell me why when I call query of the sqlarray it does not return the date in the sqlarray control?

Code follows: THNX! roboloki

```
#include "fearmonger.h"

#include <CtrlLib/CtrlLib.h>

using namespace Upp;

struct WinDlg : public WithWin10Layout<TopWindow> {
    Button button;
    SqlCtrls ctrls;
    EditInt myid;
    EditDate mydate;
    EditString myloc;

    typedef WinDlg CLASSNAME;

    void exec4() {
        SqlBool where;
        SqlBool where2;
        WinDlg dlg;

        // SQL * Select(dlg.ctrls).From(SCHEDULE).Where(ID == 3);
        disturbed.Query();

    }

    WinDlg() {

        CtrlLayout(*this, "computer");

        Title("My application with menu").Sizeable();

        Add(button.LeftPos(10, 100).TopPos(10, 30));
        disturbed.SetTable(SCHEDULE);
        disturbed.AddKey(ID);
    }
};
```

```
disturbed.AddColumn(ID,"ID").Edit(myid);
disturbed.AddColumn(LOCATION,"loc").Edit(myloc);
disturbed.AddColumn(START_DATE, "START_DATE").Edit(mydate);
disturbed.Appending().Inserting().Removing();
button <=<= THISBACK(exec4);
}
};
```

```
void Cyborg::SqArray(){
```

```
    WinDlg dlg;
    dlg.Run();
    // menu.Set(THISBACK(WinDlg()));
```

```
}
```

```
sqlite> pragma table_info(SCHEDULE);
```

```
0|ID|INTEGER|0||1
1|LOCATION|STRING|0||0
2|START_DATE|INTEGER|0||0
3|START_TIME|INTEGER|0||0
4|END_DATE|INTEGER|0||0
5|END_TIME|INTEGER|0||0
6|DESCRIPTION|STRING|0||0
```
