This works for me:

```
tab.Add(menuOpen.SizePos(), "Open");
tab.Add(menuConvert.SizePos(), "Convert");
```

```
tab.WhenSet = [&] {
    PromptOK("Selected tab " + FormatInt(tab.Get()));
    if (tab.IsAt(menuOpen))
        PromptOK("At Open");
    else if (tab.IsAt(menuConvert))
        PromptOK("At Convert");
};
```

You can even get direct access to the tabs, in this case, to disable it:

```
TabCtrl::Item& tabOpen = tab.GetItem(tab.Find(menuOpen));
tabOpen.Enable(false);
```
