Subject: Edited file sometimes reverts changes when running build

Quite a few times I've edited a file, changed some constants and then when I pressed build it undid my changes right before my eyes. Another problem I've had in TheIDE is when changing to another tab my scrollbar position won't be recalled upon return so I have to place a caret to make sure I don't lose my place. It always seems to want to go to where the caret is instead of where I scrolled to.
