zsolt wrote on Mon, 14 October 2019 05:18It causes a lot of wierd behaviour when I use APPSQL or Session's Sql object and changing databases while the app is running. It reads some data from the previously opened database. It is not so good.

So I suggest something like this:

```
void Sqlite3Session::Close() {  
    sql.Clear();  
    if (NULL != db) {  
+ SessionClose();  
        int retval;  
#ifndef flagNOAPPSQL  
        if(SQL.IsOpen() && &SQL.GetSession() == this)
```

Thanks, applied. rc5 tomorrow...
