"A ship in the beach is a lighthouse to the sea" :)

Other scenario to watch out for:

```
MyFunction(double val) {
```

```
    if (IsNull(val))
```

```
        Cout() << "Null";
```

```
    else
```

```
        Cout() << "Not Null";
```

```
}
```

```
...
```

```
MyFunction(Null); // "Null"
```

```
MyFunction(false ? 1 : Null); // "Not Null". The call sets INT_NULL instead of DOUBLE_NULL
```
