Hello,

FYI, We decided that we will make some initial git repository. The first repository I created is uppsrc submodule <https://github.com/ultimatepp/uppsrc>. You can simply replace your current uppsrc with this repository:

```
cd upppdir
rm -r -f uppsrc
git clone https://github.com/ultimatepp/uppsrc.git
```

and update it regularly with 'git pull origin master' command. I will try to sync it once in a week or two. In the future I plan to run this process on server...

Sincerely,
Klugier
