```
String Report::FormatHF(const char *s, int pageno)
{
    String result;
    while(*s) {
        if(s[0] == '$' && s[1] == '$') {
            s += 2;
            if(*s == 'P') {
                result.Cat(Format("%d", pageno + 1));
                s++;
            }
        }
        else
            if(*s == 'D') {
                result.Cat(Format(GetSysDate()));
                s++;
            }
        }
        else
            result.Cat(*s++);
    }
    return result;
}
```

OK?
