@Oblivion: thanks for the pointers to your pieces :o) I'll take a look, although I suspect in advance that I'll probably just try to implement a single thread to do stuff in the background. I don't really need a "farm of grunts", because I have just a single radio anyway. Handing over the results to a superior thread (pass objects by reference into a queue atomically, or some such) might come in handy though - it will save me some learning of the basic locking primitives, if I want to be lazy :)
