Hello Frank,

I can't really comment much on the cause of the actual error as I don't have a sample code to inspect, but what you describe here might be caused by the text your code passes to Prompt. (PromptOK).

AFAIk, the "Not in table" error is thrown when a qtf text doesn't contain a required element, or by a malformed qtf text.

When you pass a C string (a string with typical whitespaces or ANSI control codes (a chr < 0x20), or a string that can have characters used in QTF commands, such as "[", etc.) to a QTF-native widgets, e.g prompts, etc., you need to use DeQtf() function to escape the aforementioned control codes:

E.g.

```
String text = "Hello world\nThis is U++";  
PromptOK(DeQtf(text));
```

Best regards,
Oblivion.
