Hi,

The solution is simple - in the header and source file enclose include and definitions related to SQL into block "namespace Upp". And move command "using namespace Upp;" from header file to source file.

MyApp.h

```
#ifndef _MyApp_h_
#define _MyApp_h_

#include <Core/Core.h>
#include <plugin/sqlite3/Sqlite3.h>

namespace Upp {
#define SCHEMADIALECT <plugin/sqlite3/Sqlite3Schema.h>
#define MODEL <Sql05/MyApp.sch>
#include "Sql/sch_header.h"
}

#endif
```

main.cpp

```
#include "MyApp.h"

using namespace Upp;

namespace Upp {
#include <Sql/sch_schema.h>
#include <Sql/sch_source.h>
}

CONSOLE_APP_MAIN
{
....
```
