Hello koldo,

Some time ago I implemented feature for GDB that copy the text to the clipboard from the tree. Optimally, we should have the same functionality for PDB with the shared code to reduced code maintenance. I also planned to add window that will open when you want to examine full string value inside TheIDE. This functionality should also be shared between debuggers. This is optimal implementation to not favor any of debugger. Especially that PDB is not available on Linux.

I think above improvements are great, but they are not present with the GDB back-end. Mirek, do you think we can port this functionality without much effort (by extracting common code?)?

Sincerely,  
Klugier
