This is a patch - so download full 8.feb.2019 ver,
extract into some directory eg SUniGuiCreator, download and apply all patches, then download
this one also and overwrite it's base directory with this.

Some fixes/added code:

- * comport right edit output fixed(previously one could not write into it,paste worked). If there are multipleLines, backspace is still wacked, but as it seem multiline doesn't work quite well - but it may come handy in future.
- * DDS Function Generator added(viaUSBToSerial): sample code for Fy6900 - one can check how it looks/works without this device.

Yet to do:

- undo in gfx
- wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path
