This is a patch - so download full 8.feb.2019 ver, extract into some directory eg SUniGuiCreator, download and apply all patches, then download this one also and overwrite it's base directory with this.

## Some fixes/added code:

- \* comport right edit output fixed(previously one could not write into it,paste worked). If there are multipleLines, backspace is still wacked, but as it seem multiline doesn't work quite well but it may come handy in future.
- \* DDS Function Generator added(viaUSBToSerial): sample code for Fy6900 one can check how it looks/works without this device.

## Yet to do:

- -undo in gfx
- -wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path
