Subject: HttpRequest cannot get the server [SOLVED]
Posted by forlano on Mon, 24 Feb 2020 22:07:21 GMT

Hello,

I spent all the day trying to figure out this problem but with no result. Perhaps it is not U++ related.

So far with the following code

```
    String url = "some_valid_url";
    HttpRequest r(url);
    r.KeepAlive(true);
 String content = r.Execute();
 if(r.IsFailure())
 { Exclamation("error");
   r.Close();
   return;
 }
    r.Close();
    Exclamation(content);
```

I was able to get the content of the site at the given url. Now if I use

url = "http://www.vegaresult.com/vr/index.php";

or

url = "https://www.vegaresult.com/vr/index.php";

HttpRequest give an error (IsFailure()=true)
However if I paste the url in the browser I can see the site.
That site has a HTTPS protocol and configured as VirtualHost in Apache.
I wonder why HttpRequest is not able to see the site. Could it depend by the server that is in someway badly configured?

Thanks a lot for any answer!
Luigi
