ahh, i forgot to mention this somewhere.

When adding symptoms to list - one should also specify if he/she was (nano)implanted with:
yes/no/maybe/probably.

As i remember - many kids were around and before 1980 nanoImplanted for "psychological
experimentations", which is bollocks, this is nowadays used for pure psyEnergyExploitations.

If one makes such list, it can post it here in this post or on email.
