Original from file "CtrlCore/GtkAfter.h"

```
class ViewDraw : public SystemDraw {  
#if GTK_CHECK_VERSION(3, 10, 0)  
    GdkDrawingContext *ctx;  
#endif
```

After searching in /usr/include/gtk-3.0 folder for GdkDrawingContext I could not find it.  
I thought GtkDrawingArea may be the right thing.

After replacement as follows I could compile and run theide  
Seems working fine. Request Mirek to review.

```
-- GdkDrawingContext *ctx;
```

```
++ GtkDrawingArea *ctx;
```
