In this case, as in Windows, it could be an "Automatic build methods setup.." option, although I think TheIDE should have to be fully ready after make install.

Actually, this already works... And there is no difference really, if there are no .bm, ide makes them on start. You would not notice that happened.

The .bm files created with "domake" are mainly for umk command line users.
The script copy raw GCC.bm.in and CLANG.bm.in as GCC.bm and CLANG.bm.
