Subject: quick parameter question
Posted by mtdew3q on Sun, 29 Mar 2020 22:42:14 GMT

Hi-

I looked everywhere in the docs on-line and forums. Is there a way to do select sql with a parameter either U++ style expr or native? I need something like select acctnum from accounts where acctname = ?.

The ? mark is going to hold the value of an acctname based on the contents of a control. I think I can get at the value of a control by using GetActiveControl();

I'm using postgresql for the db.

thanks!
