OK, let us go a bit further, above umks is AMD64, but it seems like it should be possible to have 32-bit binary that works on all x86 systems.

At least it works on my linux (I have to add new NOSO flag so that zlib and bz2 are included from internal sources).

Please test :)

(Also adding, for future reference, GCC32.bm for building 32-bit stuff on 64-bit system. You also need to "sudo apt-get install g++-multilib" to do that...)
