Is there any way to create primary key from more than one fields using schema files?

This not work..

```
TABLE_(TEST)
  INT_ (ID) PRIMARY_KEY
  INT_ (VERSION) PRIMARY_KEY
  ....
END_TABLE
```

If from any reason previous form would be hard to implement maybe form below would be easier..

```
TABLE_(TEST)
  INT_ (ID)
  INT_ (VERSION)
  ....
  PRIMARY_KEY (ID, VERSION)
END_TABLE
```
