- not sure how would you speficy other configuration - the most straighforward is using flags

mainconfig
 "Default" = "GUI MT",
 "StdAlloc" = "GUI MT USEMALLOC";

Something like "umk -C StdAlloc".
IMHO, this is much more convenient than "umk +GUI,MT,USEMALLOC".
And half of my projects define "StdAlloc" as "MT USEMALLOC" ...

BTW, MT is now (since ~2016) implicit.

So in reality, it is GUI,USEMALLOC. But OK, we can have that.
