mirek wrote on Fri, 03 April 2020 09:31Are you running as regular user? Do you have .config folder inside the unpacked archive? What is inside? There should be umks32 folder and inside autogenerated CLANG.bm (it is after I do this on ubuntu or fedora).

There is only GCC.bm in .config/umks32/. Note that I'm using Arch and I do not have clang installed. The genrated GCC.bm seems to work just fine, it's just that the script is hardcoded to use CLANG.
