Xemuth wrote on Fri, 10 April 2020 21:29Hello community,

I want to know if skylark provide any solution to do ssl ?

Best regards
Xemuth

The idea was that Skylark lives as one of SCGI services of some http daemon like Apache. SSL would then be managed by Apache.

"Direct" HTTP mode of Skylark is mostly for application development. In production, SCGI is assumed.

Note that SCGI requests are detected automatically in Core: HttpHeader::Read level, so from skylark perspective, there is nothing to setup...
