This is a patch - so download full 8.feb.2019 ver, extract into some directory eg SUniGuiCreator, download and apply all patches, then download this one also and overwrite it's base directory with this.

Some fixes/added code:

- * settimer added: can be for eq animations which can be called through timer optional func
- * ui-items-test.esc updated: also timer animation sample

Note.txt is updated to reflect this changes(settimer/stoptimer/uiRedraw).

Yet to do:

- -undo in gfx
- -wideString output(does std:: support wideRe?), mainly if nonAnsi characters used in a path
