So I have got both good news and bad news...

It is done for X11, Gtk, Win32.

However, while trying to do that on MacOS, I have found that even existing ViewDraw stopped working. Unfortunately, it seems like MacOS issue, critical method is broken, as other people found too:

<https://cgit.freedesktop.org/libreoffice/core/commit/?id=959e8ae7ea33ce94dd80ee8ea172b6db64593873>

Given this, it actually seems impossible to implement ViewDraw for MacOS... It looks like we should actually deprecate it as well; simply use Refresh and optimized Paint....
