zsolt wrote on Fri, 15 September 2006 19:06Cool, but in book.cpp this would be better:

```
void SQLApp::EditBook()
{
    if(!book.IsCursor())
        return;
    BookDlg dlg;
    int q = book.GetKey();
    SQL * Select(dlg.ctrls).From(BOOK).Where(ID == q);
    if(!dlg.ctrls.Fetch(SQL))
        return;
    if(dlg.Run() != IDOK)
        return;
    SQL * dlg.ctrls.Update(BOOK).Where(ID == q);
    Query(q);
}
```

Ooops, thanks

Mirek
