It's nearly always Painter -- or something similar (e.g. custom rendering) but the result is always in ImageBuffer.

I am rather asking because of GetKind. At this point, it appears that it would be nice to have information about whether Image is opaque or not (and use SetSurface or AlphaBlend based on this info). With BufferPainter, I can get this info based on Clear. With generic ImageBuffer, test will be needed, unless client code uses SetKind....
