Hi,

All this is very interesting.

I just compiled RectTracker projet with svn.14195 (3 weeks old) : I wanted to see the performance difference with new solution

... and it didn't work at all !

After updating to svn.14346, it works fine again :)

I also compiled my current project in which I use my GraphCtrl widget ... and the drag/scroll is completely broken : While dragging, I get a completely white widget.

When scrolling is finished, image comes back again.

My usage of Localloop seems to be broken :?

Going back to svn.14195 for now

I am under linu, latest Fedora, with an old GPU (Nvidia GT9600)
