Mirek

Oh! Thank you, Myrek. I'm very sorry. I forgot to mention:

VectorDesA is VectorDes(but not ide/VectorDes!) without VectorDes_init.cpp file.

so, just:
1. remove package VectorDesA and add VectorDes.
2. edit VectorDesA to VectorDes in ArisVectorDes.cpp
3. temporary remove VectorDes_init.cpp from VectorDes

Alternatively, you can create VectorDesA directory (and so the package) by copying VectorDes directory and removing VectorDes_init.cpp file.

Thanks for looking and trying.
