---

Hi

I am using following folder layout

```
/opt/myapp -- application folder
/opt/myapp/templates -- for witz files
/opt/myapp/static -- for CSS and js files
```

With this I have one problem. css and js files are not accessible in web browser  
When I see html source it shows path for css as

```
static/css/mystyle.css
and full url as
localhost:8001/myapp/static/css/mystyle.css
```

but this file is not accesible from the location.

What folder layout I should use to make CSS available.
