Now I am not 100% sure what Key method is this, but I believe that you need to:

```
bool Key(dword keys, int count){  
    if(keys==K_F10){  
        HandleF10();  
        return true;  
    }  
    return TopWindow::Key(keys, count); // <== TopWindow::Key handles Tab  
}
```
