Now I am not 100% sure what Key method is this, but I believe that you need to:

```
bool Key(dword keys, int count){
    if(keys==K_F10){
        HandleF10();
        return true;
    }
    return TopWindow::Key(keys, count); // <== TopWindow::Key handles Tab
}
```
