Patch is against git rev. 4c9a6f5

Attached archive includes already patched files and a patch itself.

What it is for: this patch adds option -j to umk, which generates compile_commands.json (Compilation Database) next to a project file.

What Compilation Database is for:

<https://sarcasm.github.io/notes/dev/compilation-database.htm> |

Basically, it allows to use clang tools like below.

- clang-check
- clang-doc
- clang-include-fixer
- clang-rename
- clang-tidy
- clangd

I personally use it with ccls. And I tested it with ccls.

UPDATE: I've changed attached file.
