Subject: Patch for umk: create compile_commands.json file
Posted by Novo on Wed, 29 Apr 2020 18:23:09 GMT

Patch is against git rev. 4c9a6f5
Attached archive includes already patched files and a patch itself.

What it is for: this patch adds option -j to umk, which generates compile_commands.json
(Compilation Database) next to a project file.

What Compilation Database is for:
https://sarcasm.github.io/notes/dev/compilation-database.htm l
Basically, it allows to use clang tools like below.

    clang-check
    clang-doc
    clang-include-fixer
    clang-rename
    clang-tidy
    clangd

I personally use it with ccls. And I tested it with ccls.

UPDATE: I've changed attached file.
