Pradip wrote on Fri, 01 May 2020 12:02Hello Didier,

Thanks for replying! Yes exactly, I need date/time on x-axis. I'm trying to make something like this:

I already have a tree and an array (synced) showing the activities, I will need to sync them with the graph. Also zooming is important, it should be able to zoom in to days (S, M, T, W...) as in the image, and while zooming out it could show weeks, then months, quarter and finally year.

I won't really need layout designer, in any case I'll have to manipulate it with code.

Thanks a lot, I'll try it once you upload it :)

Well you can definitely display the days/weeks/months as you want but you will have to :
make your own GridAxisDraw child class with own grid style drawing (or maybe I could push further into Chameleon capacities) Add time custom display format method (The exact same format is not available out of the box)

For all the zoom/scroll, everything you need is available.

There is also a Linking feature that allows to sync axis between graphs (when one zooms or scrolls, the other ones follow) : maybe you could use this to link to your grid to the graph Y axis
