Hi Xemuth,

Xemuth wrote on Sun, 03 May 2020 05:58

```
http.SessionSet("RIGHT", AsString(us->GetRight())); //Set Right of user
```

```
http.SessionSet("USERNAME", us->GetLogin()); //Set username of user
```

I think you should use only sessionid. And should get username and user rights from server for every request based on sessionid.

Do not set it (username and rights) as a part of http session params. This is my suggestion.
