manuel wrote on Mon, 18 September 2006 05:21i have tried to compile the SQL\_MYsql Example, but it didn`t work. I tried to compile it with the MINGW Compiler and i have the following errors,

In file included from C:\upp\uppsrc\MySql\MySql.cpp:1:  
C:\upp\uppsrc\MySql\MySql.h:12:19: MySql.h: No such file or directory  
Can some one help me?? What must i do that it work?

Check whether you have MySql.h (this is MySql header file, not U++ header file) somewhere on your include path (include path is defined in build method).

Mirek
